

SHOWCASE

# Technical Troubleshooting Workflows

Structured troubleshooting workflows for account, payment, app, crypto, and technical support issues. Each workflow shows the first checks, questions to ask, tools to use, possible causes, escalation rules, and response templates.

Systematic diagnosis

Technical support

Customer questions

Escalation readiness

## WORKFLOW 1

# Login Issue

### First checks

- Email address
- Password reset status
- 2FA status
- Account lock status
- Browser or app version
- Recent password change

### Questions to ask

- What error message do you see?
- Are you using web or mobile app?
- When did the issue start?
- Did you recently reset your password?
- Do you still have access to your email?

### Possible causes

- Wrong password
- Expired reset link
- Browser cache issue
- 2FA problem
- Account locked
- Security restriction

### Tools

- CRM
- Admin dashboard
- Login history

- User account status
- Internal notes

#### Escalation rule

Escalate if account is locked, 2FA is inaccessible, suspicious login is detected, or login fails after basic troubleshooting.

## WORKFLOW 2

# Crypto Deposit Delay

### First checks

- TXID
- Network
- Deposit address
- Amount
- Blockchain confirmations
- Internal credit status

### Questions to ask

- Which network did you use?
- Can you send the TXID?
- What amount did you deposit?
- When did you make the transaction?
- Did you use the deposit address shown in your account?

### Possible causes

- Not enough confirmations
- Wrong network
- Incorrect address
- Network congestion
- Internal wallet delay
- Manual review

### Tools

- Blockchain explorer
- Wallet status
- Admin tools

- Internal deposit records

#### Escalation rule

Escalate if transaction is confirmed on-chain, address is correct, and balance is still not credited.

## WORKFLOW 3

# Payment Failed

### First checks

- Payment method
- Card/bank status
- Error message
- Billing country
- Payment provider status
- Account subscription status

### Questions to ask

- What payment method did you use?
- What error message appeared?
- Was the amount deducted?
- Can you provide a receipt or transaction reference?
- Did you try another payment method?

### Possible causes

- Bank decline
- Insufficient balance
- Payment provider error
- Unsupported card
- Billing information mismatch
- Duplicate payment attempt

### Tools

- Billing panel
- Payment provider logs
- CRM

- Receipt

Escalation rule

Escalate to billing team if the customer was charged but the service was not activated.

## WORKFLOW 4

# App Bug Report

### First checks

- Device type
- App version
- Operating system
- Screenshot/screen recording
- Steps to reproduce
- Account-specific or global issue

### Questions to ask

- When did the issue start?
- Does it happen every time?
- Can you reproduce it after restarting the app?
- Does it happen on another device?
- Can you send a screen recording?

### Possible causes

- App cache issue
- Frontend error
- API response issue
- Account-specific data issue
- Device compatibility problem

### Tools

- Bug report template
- Screenshots
- Screen recording
- Logs

#### Escalation rule

Escalate to product/engineering if the issue is reproducible, affects many users, or blocks core functionality.

## WORKFLOW 5

# P2P Dispute

### First checks

- Order number
- Buyer payment proof
- Seller bank confirmation
- Payment name match
- Order chat history
- Dispute history

### Questions to ask

- Has the seller confirmed receipt?
- Was the payment made from the buyer's verified account?
- Can both parties provide proof?
- Was the exact amount paid?
- Was payment made within the order time limit?

### Possible causes

- Delayed bank transfer
- False paid claim
- Third-party payment
- Incorrect amount
- Evidence conflict

### Tools

- Order panel
- Payment proof
- Bank statement
- Chat history

#### Escalation rule

Escalate to P2P/risk team if evidence conflicts, payment name does not match, or repeated suspicious behavior appears.
